(71) Applicant: TOSHIBA LIGHTING & TECHNOL CORP

(72) Inventor: TAKENO MASATOSHI

(54) BACK LIGHT AND LIQUID CRYSTAL DISPLAY DEVICE FORMED BY USING THE SAME

(57) Abstract:

**PROBLEM TO BE SOLVED:** To easily laminate and fix plural laminated layer members, such as light transmission plates and light diffusion sheets, which forms a light transmission unit without means, such as adhesion.

**SOLUTION:** Plural struts 10 are erected on a first frame 8 and plural mounting holes 14 are formed at a second frame 9. Positioning holes 7 are formed in the plural flat laminated layer members 2, 3, 4, 5, 6 forming the light transmission unit 1 including the light transmission plate 3 and the light diffusion sheet 4. The positioning holes 7 of the laminated layer members 2, 3, 4, 5, 6 are fitted onto these struts 10, by which the peripheral edges of respective kinds of the laminated layer members 2, 3, 4, 5, 6 are easily aligned. Mounting screws 13 inserted into the mounting holes 14 of the second frame 9 are screwed to the struts 10, by which the respective laminated layer members 2, 3, 4, 5, 6 are held and fixed between the first and second frames 8 and 9.
